

Zoom Boom Attachments

Zoom Boom Attachments - In the past 10 years, Skyjack was bought by the Linamar Corporation, a leading producer of precision machined components, assemblies and modules. Today, Skyjack has manufacturing plants in Hungary, the United States and Canada with extra support offices in Asia and Europe.

The Skyjack brand name became the industry leader for aerial hoist machines by combining features like serviceability, durability and quality, making their own scissor platform lifts know all over the world for product efficiency and reliability. Skyjack manufactures lots of various self-propelled aerial hoists for its international client base. Their elevated work heights reach up to fifty six feet. The company's present Boom hoist model series has telescopic booms starting from forty five feet to seventy one feet. Skyjack has plans to further extend their boom lift truck product line. The business remains a dominant player in the industry adapting fast to the continually evolving needs of all of their customers.

Recently, Skyjack purchased Carelift Equipment in August of the year 2007 and Volvo's Material Handling Equipment so as to try to expand their Telehandling product offering. The resulting Zoom Boom and VR series telehandlers together with the extra production ability further ensures the company's success and growth.

Skyjack is proud of their devotion to engineer dependable lift solutions. Their products are produced, supported and advertised all over the world.
