

## Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is a device constructed out of top quality materials intended to endure the most demanding operations and work environments. This particular piece of equipment could enable the one driving to be able to operate the blades hydraulically without leaving the seat. Side shifting models have the added ability to be able to laterally position the entire load or the arms in order to facilitate more precise carrying and placement in a quicker and much more effective manner.

The only one of its kind fork pocket design could enable the person operating it to securely sway the unit's forks without any fear of damaging the positioning cylinders. This can allow the worker the choice to either execute simultaneous or independent fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages can be converted into blade positioners on existing units.
