

## Aerial Work Platform

Aerial Work Platforms - There are lots of accessories intended for lift trucks which could be used to help expand the capabilities of your forklift and allow you to pick up things, handle materials with greater ease or to complete clean-up tasks.

Many of the accessories are specifically designed to fit on the blades themselves. Fork extensions for example, are utilized when you need much more fork length, which increases lifting capacity. Blade extensions come in lengths varying from forty eight to one hundred twenty inches. Triangular or rounded accessories are another type utilized if moving rolled material to be able to ensure it does not roll off of the typical flat blades.

Lifting attachments can be pivoting and telescoping crane accessories. They come in many kinds. These attachments are usually meant for transporting lumber, metal bars, poles or whichever type of bulky stuff. Additional attachments such as various kinds of hook plates and hooks are presented in order to pick up things making use of a chain or sling. Slab lifters and magnetic filters are other stuff which could be utilized with hook attachments. Slab lifters are specialized accessories that are intended for picking up various materials that are delivered in a slab or sheet format. Rug rams or carpet poles are other lifting tools which connect to your lift truck to make transporting rolls of carpet a lot easier. The accessory connects onto the forklift's blades and has a pole that goes through the middle of the carpet roll.

There are several different kinds of forklift attachments which can be designed for facility maintenance like for example snow blades. These forks connect to front end loaders and could transport materials such as soil, snow and dirt. Other common cleanup attachments consist of magnetic sweepers and standard sweepers. Standard sweepers consist of a broom which the lift truck forks connect onto for sweeping large spaces like for instance factory floors, parking lots and warehouse. The magnetic sweeper is the same except that it has a magnetic plate rather than bristles. The magnetic sweeper is used in places where there is lots of metal debris like on shop floors for instance. Sweepers have widths up to 60 inches and this surface area makes clean up effortless and quick.

A material spreader is one more lift truck accessory that is usually used at facilities. These spreaders are helpful for various applications like for example spreading ice melt, rock salt, pellets, seeds, fertilizers, insecticides and seed.

Another optional lifting accessory are work platforms. These can be used by numerous different companies day after day. Platforms may range in size from 36" x 36" to up to 60" x 60". Some models may be existing and are capable of folding up and storing into a smaller place. Work platforms are designed to raise employees up to an overhead location with the use of the lift truck. Larger platform models have extra space for workers to bring tools and other necessary things intended for the job. Usually work platforms are constructed of poly material or steel.
